Profile

Computer Science and Engineering student with production experience in web and network security at Cloudflare and previous research-scholarship experience in an IST/INESC-ID programme. Builds reproducible systems across software security, local LLM evaluation, AST-based program transformation, distributed applications and low-level machine learning. Strong practical skills in Go, Python, TypeScript/JavaScript, Linux and empirical evaluation. General Coordinator and President of SINFO, Portugal's largest free technology conference.

Education

Instituto Superior Tecnico, Universidade de Lisboa

BSc in Computer Science and Engineering

- Relevant results: Logic for Programming 19/20, Theory of Computation 18/20, Introduction to Software Engineering 19/20, Programming with Objects 18/20.

Lisbon, Portugal

Sep 2024 - Jul 2027 (expected)

Experience

Cloudflare

Technical Support Engineer Intern

- Resolved customer-facing cases across Cloudflare's security and edge platform, with a strong focus on zones under active attack, L3/L4 and L7 DDoS, rate limiting and WAF evasion.
- Analysed SQL and OGNL injection attempts and diagnosed WAF false positives, missed attack traffic, credential stuffing and bot activity to identify the features driving each decision.
- Troubleshoot HTTP/HTTPS, DNS, TLS and Workers applications with Linux tools, ClickHouse and Grafana; reproduced platform issues and worked with senior engineers on escalations.

Lisbon, Portugal

Jul 2026 - Sep 2026

SINFO

General Coordinator and President; previously Logistics Team

- Coordinate a cross-functional team of more than 30 members, with responsibility for year-round planning, budgeting, execution and communication with external partners.
- Previously worked in logistics for Portugal's largest free technology conference, gaining hands-on experience delivering large events under fixed deadlines.

Lisbon, Portugal

May 2025 - Present

IST / INESC-ID - Engenharia para Todos

Research Initiation Scholarship (BII), supervised by Prof. Rui Prada

- Led the Smart City strand across three schools, mentoring students in Arduino, C++, electronics, soldering and 3D modelling through monthly practical sessions.
- Designed and refined reusable technical materials and adapted complex engineering concepts to different age groups and levels of prior experience.

Oeiras, Portugal

Oct 2025 - Sep 2026

ROB9-16 - Instituto Superior Tecnico

Technical Instructor - Programming and Electronics

- Taught C++, logic design and breadboard circuit assembly to students aged 6-16, guiding them through the complete construction of an Arduino-based interactive Tic-Tac-Toe project.

Oeiras / Lisbon, Portugal

Oct 2025 - Mar 2026

Selected Projects

Cloudflare Internship Final Project - RANGE

Sole author; Cloudflare internship final project

- Engineered a TypeScript simulation toolkit to evaluate Cloudflare Rules expressions across ordered security phases, distinguishing verified decisions from assumed outcomes.
- Implemented local PII scrubbing, deterministic synthetic traffic generation, in-memory candidate mitigation testing, and an ephemeral analyser deployed on Cloudflare Workers.

TypeScript, Cloudflare Workers, Node.js

2026

JavaScript LLM Robustness under AST Transformations

Independent research prototype

- Built a reproducible security-classification benchmark with 32 balanced programs, 119 AST-derived variants, 32 unchanged controls and 366 valid local-model predictions.
- Implemented semantic regression checks, deterministic inference, resumable JSONL capture, protocol fingerprints, classification metrics, Wilson intervals and exact McNemar tests.
- Measured source-weighted stability of 88.1% and 91.2% across two models, with 100% stability on unchanged controls, while documenting the pilot's methodological limitations.

Python, JavaScript, Babel, Ollama

2026

PRYVO - Encrypted Peer-to-Peer Messenger

Sole author; GPL-3.0

- Built a cross-platform desktop messenger with direct DTLS-encrypted WebRTC transport, local-only persistence and no central message storage.
- Combined a Go/Wails backend with a vanilla JavaScript interface, WebSocket signalling, SQLite storage and client-side image compression; packaged reproducible builds with Nix.

Go, JavaScript, WebRTC, SQLite

2026

Skills

Languages: Go, Python, TypeScript, JavaScript, C, C++, Java, SQL, Bash, RISC-V Assembly, Prolog, HTML/CSS.

Technologies: Git, Linux/NixOS, Node.js, Ollama, Babel AST, WebRTC, SQLite, PostgreSQL, ClickHouse, Grafana, React, Next.js, Wails.

Security: Web and network security, WAF, DDoS and bot mitigation, TLS/HTTPS, DNS, secure coding, vulnerability analysis and false-positive/false-negative investigation.

Languages spoken: Portuguese (native), English (fluent; academic and professional use).
